- Using a properly rated jack, raise the rear of the vehicle and support the frame rails with jack stands. Ensure the jack stands are secure and set properly before lowering the jack. NEVER WORK UNDER AN UNSUPPORTED VEHICLE. Remove the rear wheels.
- Remove the lower rear shock bolts.
- With a floor jack under the rear end loosen and remove the U-bolts. Make sure the axle is well supported or it could fall when the U-bolts are removed
- Slowly and carefully lower the axle away from the springs and remove the factory centering pin and factory over-load spring.
NOTE: You may want to use C-Clamps to secure the pack before you completely remove the center pin.
- With the new ICON (51200) pack on the ground, C-clamp the leaves together and remove the nuts on the guide pins to expand the pack.
- Separate the OEM secondary springs from the main leaf spring using a pry bar carefully un-folding each of the collars/spring clips. Remove the (2) OEM secondary leaf springs that are shown. [FIGURE 1 & 2]
